ROSNER

RoBust softmatt

Flexible. Velvety. RoBust.

Rosner RoBust softmatt is a solvent-based ultra-matt 2-component PUR finish that can be used as a universal topcoat for furniture and interior design. As the product name suggests extremely scratch-resistant and in the same time, velvety surfaces with anti-fingerprint effect can be achieved.

The flexible combination with different transparent primers allows the grain enhancement to be individually designed. Moreover, it is possible to provide pigmented coatings with the special characteristics of this finish coating and thus to protect their coloured surfaces from premature yellowing and fading with special UV filters.
